                                                                                                                                                                                                                                                                                                         predicted from hfgl2 DNA (see AAV84139). Fgl2 is a 70 kba transmembrane serine protease that has immune procoagulant activity. The invention provides a method for inhibiting immune coagulation by inhibiting the activity or expression of Fgl2. The method can be used in vivo to treat a condition which requires a reduction in immune coagulation such as bacterial and viral infections, cancer,

Fg12 is a 70 kDa transmembrane serine protease that has immune procoagulant activity. The human Fg12 amino acid sequence is given in AAW88236. The invention provides a method for inhibiting immune coagulation by inhibiting the activity or expression of Fg12. The method can be used in vivo to treat a condition which requires a reduction in immune coagulation such as bacterial and viral infections, cancer, glomerulonephritis, a number of gastrointestinal diseases,
                                                                                                                                                                                                                                                                                     inhibitor; infection; graft rejection; glomerulonephritis; cancer; gastrointestinal disease; foetal loss; therapy; vaccine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     used to treat conditions including graft rejection and

A vaccine containing an Fg12 protein or peptide is used for prevention of graft rejection or foetal loss (claimed).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  77.9%; Score 1853.5; DB 20; Length 432; 77.7%; Pred.             Human TIE-2 (tyrosine kinase with Ig and EGF homology domains) ligand 2 (AAW01411) is a ligand that binds the TIE-2 receptor. Its amino acid sequence was deduced from a cDNA clone (AAT44321) derived from human foetal lung cells. TIE-2 ligand 2 is a receptor antagonist useful for blocking blood vessel growth, for tumour therapy and for treating a proliferative disorder of a blood-forming organ. It can be obtd. from natural sources or expressed

```
AAR94605 is a human TIE-2 (hTIE-2) ligand 2 derived from a pBluescript KS clone. hTIE-2 ligand DNAs of the invention are recombinant versions of the native ligand coding sequences and may be used to produce the ligands at a high yield. Antibodies and receptor bodies that bind to TIE-2 ligands may be used to inhibit ampiogenesis and neovascularisation (e.g. associated with tumour development) and the TIE-2 ligands themselves are useful to promote neovascularisation and wound healing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           184 VNSLDGKCSKCPSQEQIQSRPVQHLIYKDCSDYYAIGKRSSETYRVTPDPKNSSFEVYCD 243

receptor VEGFRI. The present sequence is human angiopoietin-2. Angiopoietin-2 may be operatively attached to the anti-VEGF antibodies of the present invention. Angiopoietin-2 acts to disturb capillary structure and is thought to lead to vessel recgression. The anti-VEGF antibodies of the present invention are useful for the treatment and diagnosis of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to anti-Vascular Endothelial Growth Factor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         (VEGF) antibodies that bind to the same epitope as the monoclonal antibody ATCC PTA 1595 and which significantly inhibit VEGF binding to the VEGF receptor VEGFR2, without inhibiting VEGF binding to the VEGF

counteracts the blood vessel maturally occurring angiogenesis antagonist when counteracts the blood vessel maturation and stability mediated by Ang-1.

Constabilisation factor, converting angiogenesis agonist, and is a maturation or stabilisation factor, converting immature vessels to mature vessels.

Con stabilisation factor, converting immature vessels to mature vessels.

Both Ang-1 and Ang-2 are useful in a therapeutic approach to the creatment of vascularised tumours. The invention relates to a binding ligand comprising a targeting agent that binds to a mainophospholipid, inked to a therapeutic agent (e.g. Ang-2). Aminophospholipids are stable consisting mature or causes tumour necrosis (possibly by cell- or complement-mediated cytotoxicity and/or apoptosis). The binding ligand induces cogulation (thrombosis) in tumour vessels. The binding ligand induces cogulation (thrombosis) in tumour complement-mediated cytotoxicity and/or apoptosis). The binding ligands are used to treat vascularised tumours, malignant or benign, in animals, especially large tumours.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match 22.0%; Score 522; DB 21; Length 496; Best Local Similarity 27.9%; Pred. sequence. Ang-2 is a naturally occurring anglogenesis antegonist when vascular endothelial growth factor (VEGT) levels are low, and generally counteracts the blood vessel maturation and stability mediated by Ang-1.

Ang-1 is a naturally occurring anglogenesis agonist, and is a maturation or stabilisation factor, converting immature vessels to mature vessels.

Both Ang-1 and Ang-2 are useful in a therapeutic approach to the treatment of vascularised tumours. The invention relates to a composition comprising an anti-anihophospholipid antihody, or its antigen binding region. The composition is used to kill tumour vasculature endothelial cells. Aminophospholipids are stable and specific markers accessible on the luminal surface of tumour blood vessels. Any of or an Ang-2 may be used in the composition of the invention. The composition is used to treat malignant or benign vascularised tumours in animals, especially large

anti-vege antibody; monoclonal antibody 2c3 ATCC PTA 1595; Veger receptor; Vegersk; KDR/FRLY, VeGRRI; FIL-1; andjodenesis; macular degeneration; ocular neovascular disease; cancer; vascularised solid tumour; ATDS; metastatic tumour; endothelial cell proliferation; inflammatory disorder; athersoclerosis; diabetic retinopathy; corneal graft rejection; acquired immune deficiency syndrome; infection; restenosis; fungal ulcer; sickle cell anaemia; endometriosis; anglopoietin-2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; immunoconjugate; anti-vascular endothelial growth factor antibody;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to antibody-based compositions comprising an immunoconjugate such as anti-vascular endothelial growth factor (VEGP) antibody (Abb) (or its antigen-binding fragment), attached to a biological agent, where the Ab binds to the same epitope as the monoclonal antibody (MAb) 2C3 ARCC PTA 1595, and significantly inhibits VEGF binding to the VEGF receptor VEGFR2 (KDR/FIK-1) without inhibiting vEGF binding to the VEGF receptor VEGFR2 (FIL-1). The compositions of the invention are useful in therapy, and diagnosis, for inhibiting angiogenesis in an animal having ocular neovascular disease or macular degeneration, and for delivering a biological agent to a vascularised
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               comprises

tumour. The compositions can also be used for treating cancer and subjects at risk of developing, a vascularised solid tumour, a metastastic tumour or metastases from a primary tumour. The composition is useful for specifically inhibiting VEGF-induced endothelial cell proliferation, without significantly inhibiting VEGF-induced marcophage, osteoclast or chondroclast function. The compositions can be used for treating various alisases such as inflammatory disorders, atherosclerosis, diabetic retinopathy, restenosis, acquired immune deficiency syndrome (AIDS). Blood borne tumours, corneal graft rejection, Crohn's disease, fungal ulcers, infections, sickle cell anaemia, and endometriosis. The present sequence represents human angiopoletin-2. Angiopoletin-2 may be attached or functionally associated with anti-VEGF antibodies.

The invention relates to isolated polynuclectide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynuclectides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          quantitating a polypeptide in tissue, as molecular weight markers and as food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABGO010-ABG30377 represent novel human diagnostic amino acid sequences of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   22.0%; Score 522; DB 22; Length 572;

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity.

                                                                                                                                                                                                                                                                                                                                             14;
                                                                                                     used in the method of the invoition, involving the production of TIE-2 ligands which promote healing. The nucleic acids, vectors and host cells used in the method of the invention are useful for the recombinant production of the ligands. The ligands, etc. are useful for blocking blood vessel growth, promoting neovascularisation, promoting the growth or differentiation of a cell expressing the TIE receptor, blocking the growth or differentiation of a cell expressing the TIE receptor and for attenuating or preventing tumour growth in

The sequences of the invention can be used in the prevention and treatment of diseases related to cells which express the Tie-2 receptor. The present sequence represents human Ang2_443 protein.

used in the method of the invention, involving the production of TIE-2 ligands which promote healing. The nucleic acids, vectors and host cells used in the method of the invention are useful for the recombinant production of the ligands. The ligands, etc. are useful for blocking blood vessel growth, promoting neovascularisation, promoting the growth or differentiation of a cell expressing the TIE receptor, blocking the growth or differentiation of a cell expressing the TIE receptor and for attenuating or preventing tumour growth in 160 ELQLLEHSLSTNKLEKQILDQTSEINKLQDKNSFLEKKVLAMEDKHIIQLQSIKEEKDQL 219 165 ----NMNNIENYVDSKVANLTF-----VVNSLDGKCSKCPSQEQIQSRPV 205 206 QHLIYKDCSDYYAIGKRSSETYRVTPDPKNSSFEVYCDMETMGGGWTVLQARLDGSTNFT 265 326 LKYRLHVGNYNGTAGDALRFNKHYNHDLKFFTTPDKDNDRYPSGNCGLYYSSGWWFDACL 385 Ouery Match 21.8%; Score 517.5; DB 19; Length 499; Best Local Similarity 28.1%; Pred.
